Levil Aviation's New App

Oviedo, FL: Levil Aviation is proud to announce the release of our new App, which will be available on the app store Thursday, November 12th, 2020.

The new Levil Aviation App is a customizable digital instrument panel that aims to bridge the gap between emerging wireless avionics and limited compatibility with Advanced Navigation

Apps. The new iOS-based App is designed to display information from wireless devices such as the iLevil3 series, the B.O.M, or other GDL90 devices, simultaneously while using navigation tools such as Foreflight, iFlyGPS, WingX Pro, and many more side by side. We have made an "App for all" so no matter what part of the world you fly in, or what your preferred navigation app is, the Levil Aviation App has you covered.

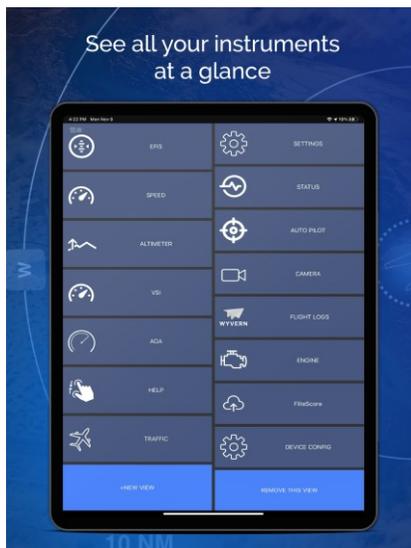

"We ran into a hardware-software compatibility road-block," explains Ananda Leon, Product and Software Developer at Levil Aviation. "As we developed more features into our wireless avionics, in combination with other emerging technology, Navigation App developers have been playing catch-up for the past

years, preventing pilots from using all the features of their avionics."

Levil Aviation's new App closes this gap with its plug-in based modules. Each module or window is configured to display a certain instrument or feature, and the pilot has the power to select which modules will be displayed at any given time. Modules can range from primary flight display to auto-pilot control, to an interface for a new gadget from third party companies.

"By opening the doors to new emerging technology from other manufacturers, we will be able to amplify the capabilities of your wireless glass cockpit exponentially," says Ananda Leon. "The third-party plug-ins we have been working on will bring safety in aviation to a whole new level."

The Levil Aviation App utilizes iOS multi-tasking features to work side-by-side, full screen, or slide-over,

where modules can be shown on top of your navigation app of choice. The current version includes interfaces for traffic avoidance, engine monitoring, EFIS, angle of attack monitoring, automatic flight upload to Wyvern, or FliteScore's cloud-based flight analysis software, AeroPath's radio control interface, the beta interface for Levil's patent-pending wireless autopilot, and much more.

With such a customizable platform, Levil Aviation is excited to see where this App will go and how it will impact the way pilots fly today by having everything at the tap of a screen. Levil Aviation is always looking for ways to innovate and improve. We welcome any customer or developer to provide us with ideas or feedback to elevate their flight experience.

If your company is interested in integrating data into Levil Aviation's App, please contact info@levil.com

To download the App on November 12th, visit the app store and search Levil Aviation.

Kind Regards,

Ricardo Leon
